

Why Biodiversity is important for our generation?

What is biodiversity?

Biodiversity is all around us and we are part of it.

There are three main elements: different kinds of living things on Earth - including animals, plants, vegetables, fungi, algae, bacteria and even viruses.

Why biodiversity is important ?

Biodiversity is the result of 3.8 billion years of evolution, and is extremely important for human survival. We rely on nature for many basic resources, including food, building materials, warmth, textiles or active ingredients in medicines.

What can we do to protect Biodiversity?

- 1) practical things that you can do every day.
- 2) using sustainable techniques in your garden.
- 3) support studies by observing and describing wildlife and ecosystems.
